# ASCOMY

Route Optimization for perfect deliveries

When the roads are in your hands, **optimization reaches its highest level**

ASCOMY is an advanced system for distribution management and route planning. With **ASCOMY** all aspects of distribution are managed in one system that provides you with two strategic capabilities:

1. Optimal Route Planning using an intelligent set of tools

2. Full control of the distribution process in real time using Real Time Distribution Dashboards
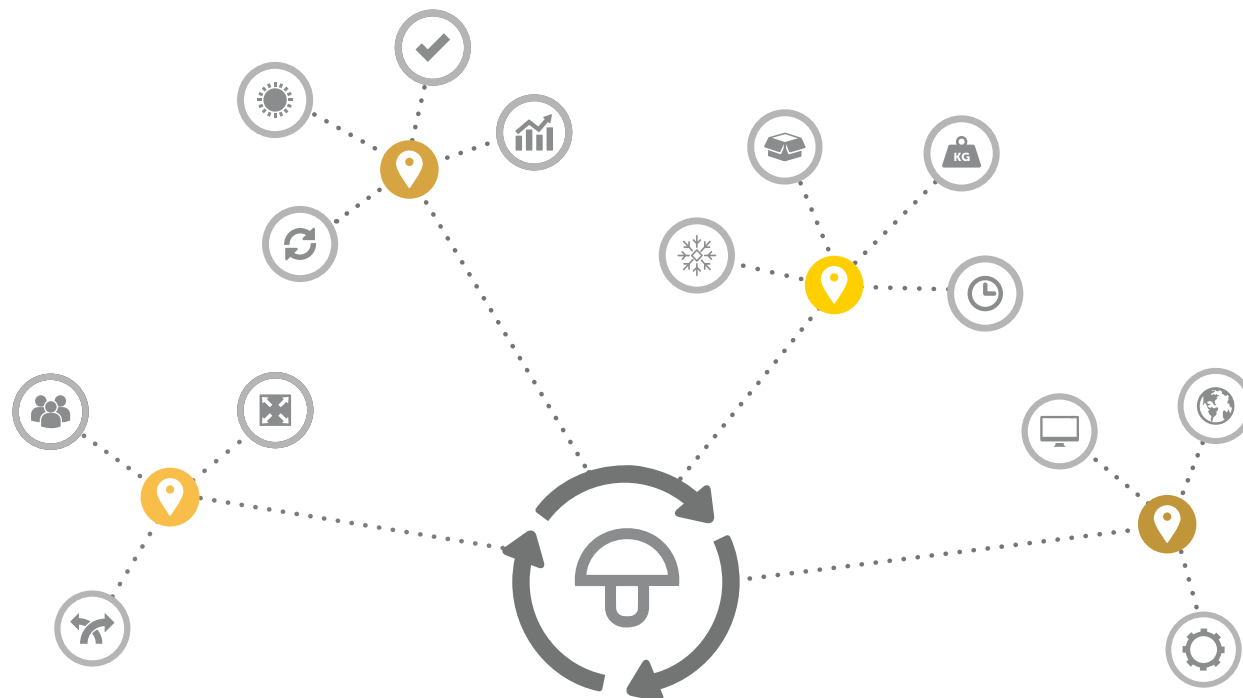

Perfect Route Planning

ASCOMY Delivery Planner optimizes your distribution routes. All delivery data and orders are imported to the system, while optimizing the route, eg, delivery locations, delivery requested dates, inventory, customer time slot restrictions, driving routes, trucks, drivers and more.

Ease of use has always been a major factor in developing **ASCOMY**.
The web interface is intuitive and user friendly.

The final result
A well-planned route for each truck.

Real-time monitoring

REAL TIME
SUPERVISION DASHBOARD

ASCOMY dashboards provide intuitive user friendly tools to monitor and supervise the progress of deliveries as well as the ability to respond in real-time.
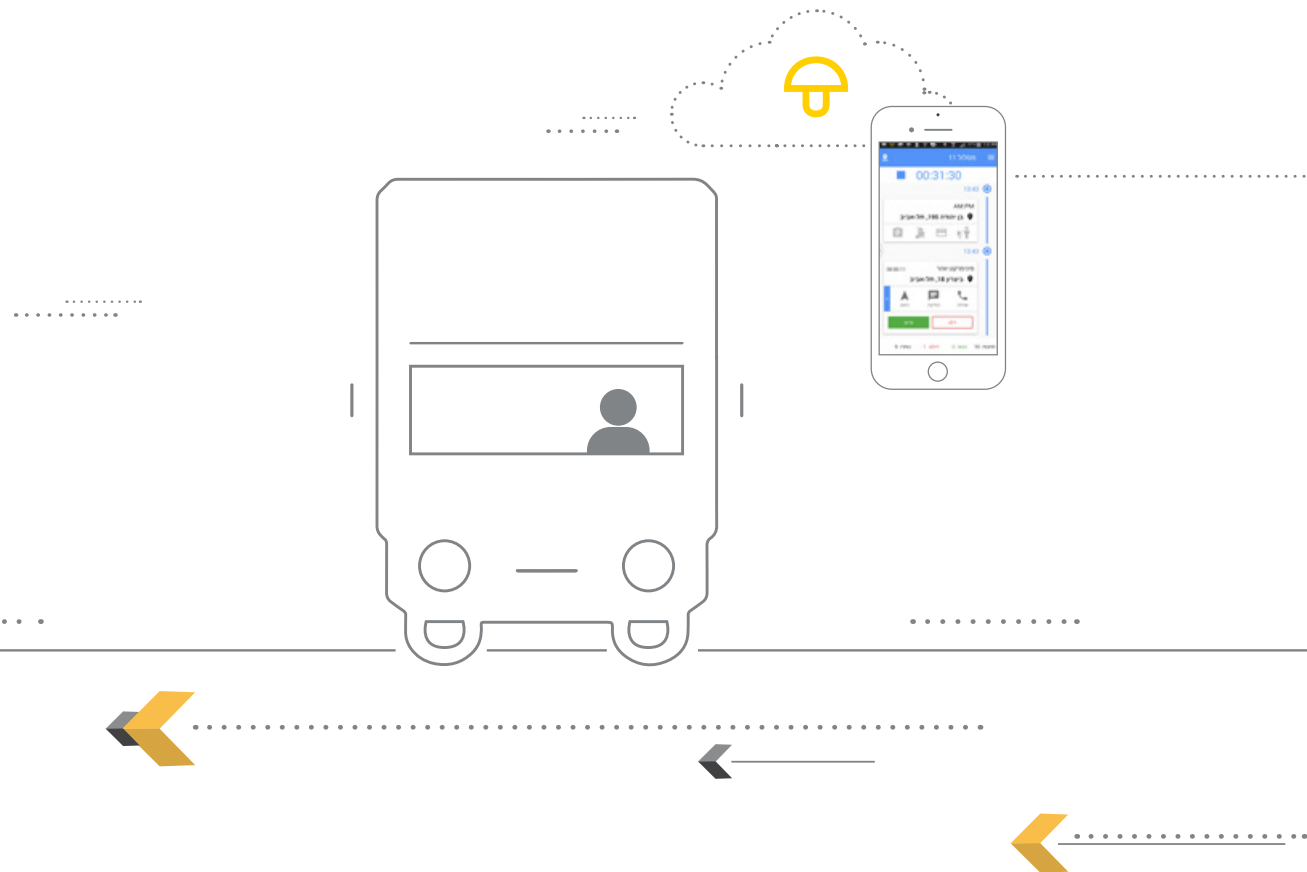

Driver-Friendly Application

An application, used by the driver, for reporting activities during delivery. All activities are transmitted in real time to the **ASCOMY** dashboard, where the distribution manager can track deliveries from the warehouse to the customers.

The app handles the entire delivery process, from loading the truck at the warehouse, delivery to the customer and finally, returning to the warehouse after completing the route.

The app includes a navigation-ready route, integration with **WAZE**, capturing digital signatures, reporting of delivery confirmation, processing pickups, and invoicing.

Benefits for the distribution manager

- Saving significant time/effort in creating the delivery plan
- Optimized distribution routes
- Simple and informative loading plan, effective and fast

- Monitoring progress of assignments in real-time
- Full control of distribution process from beginning to end
- Real-time driver performance display

Benefits for the organization

- Significant reduction in planning time and efforts
- Accuracy and increased customer service
- Reduction in delivery time
- Significant savings in operating costs (decreased mileage, fuel costs)
- Significant savings in driver working hours

Benefits for the driver

- Organized work plan
- Real time notifications
- Decreased driving time
- Effective driving instructions

Fast and simple implementation

ASCOMY is designed to meet your organizational needs. The system can be interfaced to current enterprise systems in a quick and simple process.
Rapid implementation is achieved thanks to PocketLink's experience and knowledge in interfacing with various systems. PocketLink has built-in adapters to many Accounting/ERP packages.

ASCOMY is an advanced system for planning your routes and deliveries, and which can be used from any web browser.

ASCOMY can be deployed on PocketLink's cloud or Installed on a computer in your local network.
